New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistant against oomycete pathogens such as Phytophthora infestans.

Example 5; SEQ ID NO 38; 86pp; English.

This invention relates to novel isolated polynucleotides that confer CC resistance against late blight caused by the comycete pathogen CC Phytophchora infestans, which threatens both tomato and potato crops. CC Specifically, it refers to a gene cluster (namely Rpi-blb) that encodes CC leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-blb, RGC1-blb, RGC3-blb and RGC4-blb, can be conserved as plant growth regulants. They are useful in providing consistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate disease susceptibility. Resistance can be conferred by transformation of existing potato and tomato cultivars with the gene, a procedure that is more straightforward and faster than conventional introgression breeding. This polynucleotide sequence is the Solanum bulbocastanum RGC1-blb coding CD DNA containing an intronic sequence in an exemplification of the

This invention relates to a novel DNA sequence in the field of plant disease, in particular comycete infections. The DNA sequence encodes a protein which may provide a plant or its progeny with at least partial resistance against an comycete infection caused by Phytophthora infestans. The invention may be useful for the development of compounds with a fungicide activity. The DNA sequence of the invention encodes an Rpi-blb protein comprising 970 amino acids. The nucleic acid, vector, cell, protein or binding molecule is useful for providing a plant or its progeny with resistance against an comycete infection such as late blight (a disease of major importance to production of Solanaceae such as potato and tomato cultivars). The present sequence is that of the Standaceae such as potato and tomato cultivars).
                                                                                                                                                                                                                                                                                        Claim 6; SEQ ID NO 51; 98pp; English.

This invention relates to novel isolated polynucleotides that confer resistance against late blight caused by the comycete pathogen Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-bbb) that encodes leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-bbb, RGC1-blb, RGC3-blb and RGC4-blb, can be described as plant growth regulants. They are useful in providing resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate disease susceptibility. Resistance can be conferred by transformation of existing potato and tomato cultivars with the gene, a procedure that is more straightforward and faster than conventional introgression breeding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gene; de;

Patent No. 6350933
GENERAL INFORMATION:
APPLICANT: Michelmore, Richard W.
APPLICANT: Shen, Kathy
APPLICANT: Meyers, Blake
TITLE OF INVENTION: Procedures and Materials fo
TITLE OF INVENTION: Conferring Pest Resistance
UMMBER OF SEQUENCES: 140
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
COUNTRY: USA
